

Object: Create a dynamic graph using d3js take example from (<http://nlpcore.com/graph/?q=Pc3%20cell>).

1. Add arbitrary controls over nodes and edges, such as feedback button
2. On clicking these buttons they should initiate a javascript function.
3. Create a simple javascript function that can trace user activity and the buttons clicked and stream over to a dummy http endpoint. This will be extremely useful for feedback mechanism.
